Call Center Performance Report

January - March 2021 Analysis
Prepared by Wama Atoshi

Executive Summary

This comprehensive analysis examines the call center's performance across operational, agent, and efficiency metrics for the period from January to March 2021. The dashboard shows strong operational performance with few areas for improvement. Key Performance Indicators (KPI) Analysis

- Total Calls: 4,054
- Answer Rate: 100%
- Average Customer Satisfaction: 3.0
- Average Speed of Answer: 68 seconds
- Resolution Rate: ~90%

As depicted by the KPIs above, the call center handled 4,054 calls during this period, achieving a 100% answer rate, which demonstrates strong operational efficiency. The overall resolution rate was approximately 90%, showing that most of the customers' issues were successfully resolved. Despite these operational strengths, customer satisfaction still averaged 3.0, reflecting a neutral experience. The average speed of answer was 68 seconds, slightly above industry standards, which may be a contributing factor to the moderate satisfaction levels. Call volume peaked in January before declining and then stabilizing in February and March. Agent performance was consistent overall, although minor variations in satisfaction scores indicate opportunities for performance-based coaching.

Call Volume Analysis

As shown on the dashboard, January recorded the highest call volume with 1,455 calls, followed by a decline and stabilization in February and March with ~1,300 calls. The calls per day ranged from 100 to 190 calls. This fluctuation may suggest potential seasonality or operational events in January. Staffing optimization could be aligned with peak call days.

Call Distribution by Topic

Call topics included Streaming, Payment, Technical Support, Administrative Support, and Contract Issues. The distribution appears balanced across categories, suggesting diversified customer concerns.

Agent Performance Analysis

The workload amongst the agents appears balanced, with only a few variations in average satisfaction score, showing opportunities for internal mentoring and improvements. The resolution rate aligns closely with call distribution, indicating consistent agent performance.

Efficiency Analysis

The 100% answer rate reflects strong operational management. However, the 68-second average speed of answer may impact customer perception. Reducing response time below 45 seconds could significantly improve satisfaction scores.

Strategic Recommendations

- Reduce the average speed of answer to below 45 seconds.
- Introduce follow-up for unresolved cases.
- Establish performance-based coaching and mentorship programs.
